

COVID 19 UPDATE - ACRYLICON INDUSTRIAL FLOORING IS DOING OUR PART TO PREVENT CROSS-CONTAMINATION NOW!

UPDATE - ACRYLICON FLOORING CONTINUES TO OPERATE AND PROVIDE ALL SERVICES, FOLLOWING GOVERNMENT ADVICE. OUR STAFF AND INSTALLERS ARE FOLLOWING THE LATEST GUIDELINES SET BY THE WHO AND CDC, AND WILL WORK WITH OUR CUSTOMERS TO ENSURE THEIR OWN COVID-19 PROCEDURES ARE FOLLOWED.

One of the key factors in preventing cross contamination, as recommended by FDA, EU Food Hygiene Regulations, is the use of non-porous and easy to clean surfaces.

Most floors have, or develop pinholes in a short period of time. Disinfectant's and hot water only attack the top of the pore or pinhole, leaving all the dirt and contaminants below, to grow and multiply further. High-pressure cleaning will only attack the surface in the same way - and has the chance to spread out the dirt and bacteria from those pores/ pinholes by flicking it up onto other surfaces.

PORES/PINHOLES IN THE FLOOR CANNOT BE CLEANED. ACRYLICON IS THE ONLY FLOOR IN THE WORLD MARKET THAT IS PROVEN TO STAY NON POROUS AND HYGIENIC IN WET AND HARSH ENVIRONMENTS FOR 20+ YEARS.

LET US HELP YOU NOW

We work round-the-clock to provide solutions that fit within your operation and get your staff back on the floor within 2 HOURS AFTER INSTALLATION.

We are a resilient community, rooted in an irrepressible spirit and passion to support each other in all circumstances. I remain steadfast in my belief that we will persevere and emerge stronger as a community through this adversity, TOGETHER.
